PRISMÉ

ÉCLAT

Personal Handheld Reflector · Full Specification & Ecosystem Reference

Tagline: Your Mirror, Evolved. | Status: Patent Pending

1. PRISMÉ ÉCLAT — Positioning

ÉCLAT is PRISMÉ's most intimate reflector. It is designed for personal, daily, and mobile rituals where truthful reflection is required without environmental dependency.

ÉCLAT is not a smart mirror. It has no on-board user interface, no guidance overlays, and no visual prompts. It is a mirror first, enhanced only by light and an intentionally activated camera.

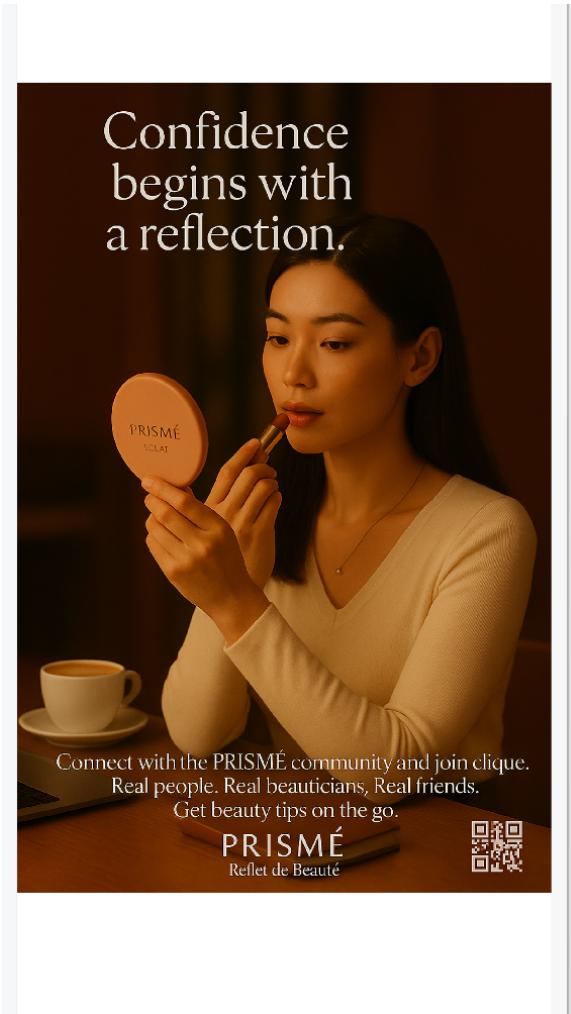

ÉCLAT — Closed form. Circular, calm, and personal.

2. Design Philosophy

ÉCLAT follows strict Maison discipline:

• Mirror-first behavior — the mirror never becomes a screen
• Absolute restraint — no interface competes with reflection
• Structural privacy — trust is enforced by design, not settings

ÉCLAT behaves exactly like a mirror until the user explicitly chooses to activate additional functions via the PRISMÉ app.

ÉCLAT in use — intimate, mobile, and discreet.

3. Physical Architecture

Form factor: Circular handheld reflector
Construction: Precision-molded housing with integrated mirror surface
Finish: Soft-touch luxury polymer (Maison palette)
Edges: Rounded ergonomic grip profile
Hinge: Concealed, smooth-action opening
Balance: Optimized for extended handheld use

ÉCLAT — Open configuration showing mirror surface and integrated light ring.

4. Mirror, Light Ring & Camera

The mirror surface provides distortion-free, true-to-life reflection. A uniform circumferential light ring surrounds the mirror, delivering soft, even illumination without conveying information.

A discreet inboard imaging module is structurally hidden within the housing. The camera is not always active and never operates without explicit user intent.

ÉCLAT — confidence through truthful reflection.

5. Interaction Model

ÉCLAT has no touch interface, no on-mirror UI, and no embedded guidance.

All advanced interaction occurs off-mirror via the PRISMÉ app. The object itself remains visually and behaviorally pure.

6. In-App Reflection (Comparison)

PRISMÉ provides an optional in-app reflection mode for continuity when no physical reflector is available.

ÉCLAT (Hardware):
• True optical mirror
• Natural depth and lighting
• Private, non-performative experience

PRISMÉ App (In-App Reflection):
• Camera-based representation
• Contextual and temporary
• Explicitly secondary to hardware

The in-app reflection mode is available but not promoted. ÉCLAT remains the preferred and authoritative reflection experience.

7. Privacy & Trust

ÉCLAT enforces privacy structurally:

• No background recording
• No autonomous activation
• Clear user intent required for camera use
• Perceptible light and camera states

Privacy is not configurable; it is guaranteed.

8. Intended Use Scenarios

• Daily makeup and skincare rituals
• Travel and on-the-go preparation
• Private moments before meetings or events
• Continuity when ATELIER or ATELIER PRO is unavailable

9. Relationship to the PRISMÉ Ecosystem

ÉCLAT: Personal, handheld, intimate
ATELIER: Home and private spaces
ATELIER PRO: Studio and professional environments

ÉCLAT introduces the PRISMÉ philosophy in its smallest and most human form.
